

The Rock Family Song

You can listen to this song being performed at
http://www.learninggamesforkids.com/science-games/science-songs/rock_song.html

We are all solid members of the rock family tree

We're metamorphic, igneous or sedimentary

I'm granite - I'm agate - I'm sandstone - I'm soapstone

We're flint, gneiss and gypsum and quartzite

I'm limestone - I'm pumice - and I am mica-schist

We're porphyry, obsidian and marble

We are all different branches of the same family tree
But we're all solid members of the rock family.

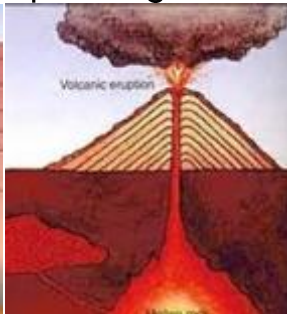

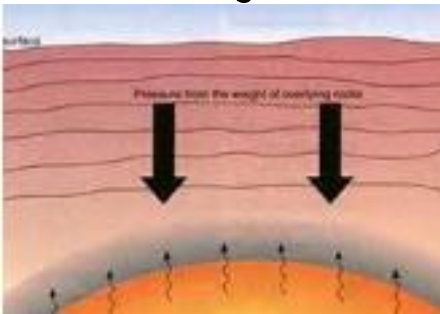

(Spoken:)
Hey! Don't forget us!
I'm quartz - I'm slate - I'm shale - I'm hornblende

We're cinnabar, hematite, talc

(Sung:) Metamorphic, igneous or sedimentary

We are all solid members of the rock family.

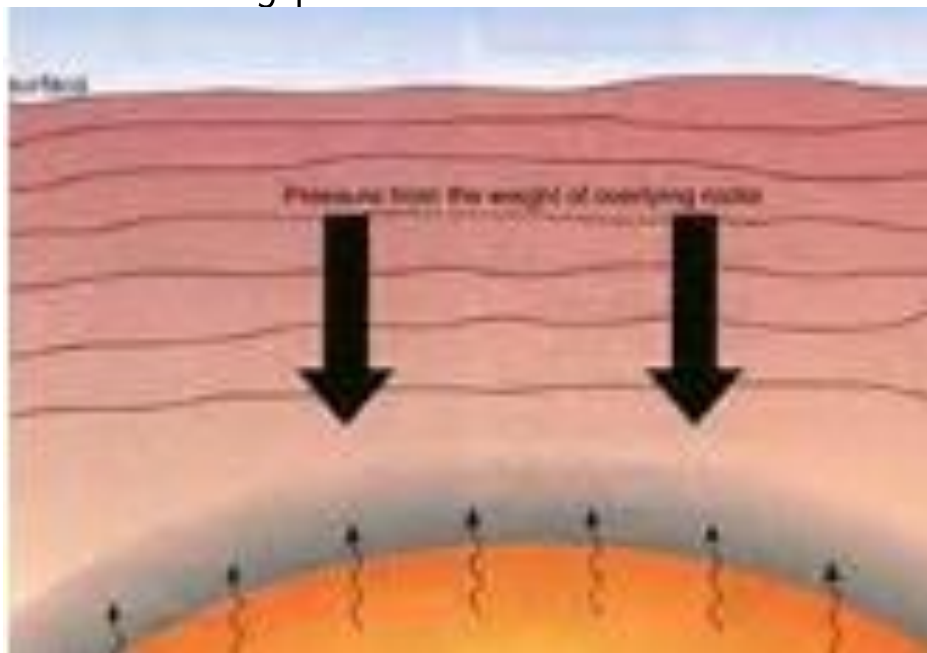

(Spoken:)

Which of you are the metamorphic rocks?

We are! I'm slate - I'm gneiss - I'm schist - I'm quartzite

We were formed when other rocks were squeezed and changed by pressure in the earth.

Which of you are the igneous rocks?

We are!

I'm granite - I'm basalt

We are two of the igneous rocks.

We were formed when molten rock solidified.

And how about the sedimentary rocks?

We are sedimentary rocks!

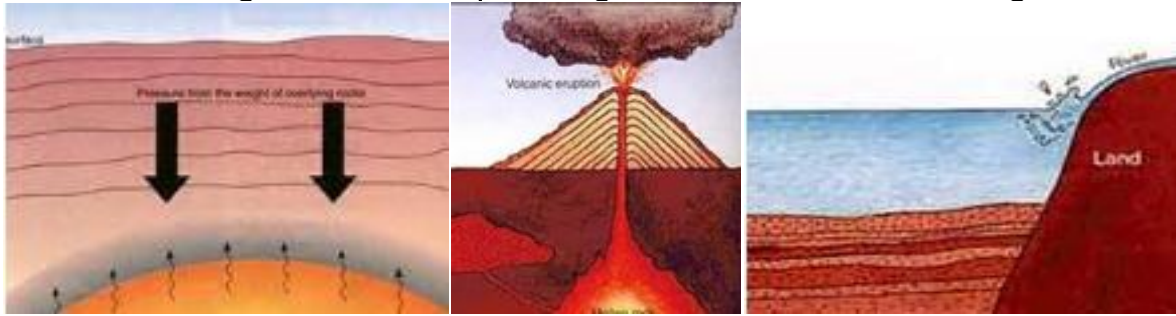

Limestone - sandstone – shale

We were formed when rocks were broken down by weathering and deposited in layers in the rivers, lakes and ocean.

(Sung:) Metamorphic, igneous or sedimentary

We are all solid members of the rock family.
